

Industrial pressure transmitter in a new package

The series [AMS 4711](#) (5mbar to 2Bar) are distinguished by a new compact package. Consisting of PA6.6 material the robust transmitter is usable in rough industrial applications

AMS 4711 has for all relative and differential versions underside pressurization as a standard and is thus suitable for measuring pressure in a number of different liquids and reactive gases for e.g. industrial, medical and HCAC-applications.
